

Abstract

The present invention relates to a wiper device for a window (12), in particular in a motor vehicle, having a wiper blade (14), a mechanical system (16) that drives the wiper blade (14), and having a control device (18), the control device (18) compensating for the clearances of the mechanical system (16) as a function of load changes and/or as a function of service life; as well as a method for operating such a wiper device.
